„A COMPANY THAT DOESN'T WASTE
TIME DISCUSSING, BUT RATHER
GETS ITS WORK DONE.“

HIGHLY DEMANDING IS FINE

The planning and execution of high-class cultural and sporting events requires that all partners work as a wellknit team. Reliability, as well as the appropriate technical skills and experience, are key factors.

Since 1990 EVENTRONIC has been proposing its technical consulting, planning, layout and installation services for large-scale LED screens. Our work is both reliable and economical. This should be what you are looking for.

EVIWA 22

6 x 3,5 m

21 square metres of projection area

Total weight: 3500kg

Aspect ratio: 16:9

EVIWA 30

ca. 7,5 x 4 m

30 square metres of projection area

Integrated video and audio control

Aspect ratio: 16:9 or optional 4:3

EVIWA 60

ca. 10,5 x 5,8 m

For up to 60 square metres of projection area

Can be expanded directly on site

Aspect ratio: 16:9 or 16:10
as well as portrait mode

NEW: CIDDİ

Simply import via web, cell phone
or LAN - conveniently automated
according to plan and flexible
if required directly in real time!

MODULAR VIDEO SYSTEM

DETAILS ARE IMPORTANT

As standard solutions are not sufficient for EVENTRONIC, our technicians regularly check, test and optimise cutting-edge techniques and equipment as they become available in order to render them user-friendly and failsafe.

SAFETY HAS PRIORITY

Jürgen Johnen

Legal safety requirements are not just taken very seriously by EVENTRONIC, they are strictly respected and often exceeded. This policy is applied to all technical installations, but above all the requirements imposed to ensure totally safe working conditions for employees. They have for example at their disposal sub-constructions and LED screen containers with verified application certificates (construction code). Respect of the legal requirements of EMV-Richtlinien (electromagnetic compatibility guidelines) is also an integral part of our technologies.

IT 'S NOT ONLY ABOUT PIXELS

The quality of the LEDs used in large-scale screens is often more important than the distance between these LEDs (pixel spacing) and a key element if an excellent image quality is to be obtained. The use of LED/SMD is essential for these applications. These are high-quality, long-life LEDs and may be considered environmentally-friendly thanks to their long working life for example. When the correct technology is used, the image can be synchronised with the sound without drift. The image control is as important as the image quality, in particular when it comes to colour quality and consistence. WLAN controlled adjustment of the video screen in order to ensure constant adaptation to changes in surrounding light conditions has also been an integral part of our work for many years. To achieve this we require qualified technicians who know exactly what they are doing. It goes far beyond a simple question of pixels – just ask us!

SUMMERBREEZE

We were offered the opportunity to take part in the mission at the SummerBreeze Festival in Dinkelsbühl. We provided all of the LED technology on site.

"At first I was sceptical when I heard EVENTRONIC would be providing the screens, but everything went great. So let's do it again some time, see you soon!"

DAVID GARETT

For the recording of the live DVD, three LED video screens were installed at the Wuhlheide in Berlin on behalf of the PoolGroup. Central on the stage was a circular LED wall with a diameter of 6 meters, and two additional video walls were positioned on the sides of the stage.

"An excellent LED video wall was essential for DVD recording. EVENTRONIC provided the appropriate technology at a fair price-performance ratio."

DRIVE IN CINEMA

The Aachen Drive-In Cinema provided an incomparable movie experience, realized through a 120 square meter large modular video wall. The on-site technology delivered top quality and gave the entire experience a unique touch.

"For us, the use of first-class equipment is essential. EVENTRONIC provides the appropriate technology and know how to use it correctly. What more can one ask for?"

DEICHBRAND

Festival on the North Sea featuring a total of approximately 270 square meters of LED surface. Various types of LED technology were used, including EVIWA 30, EVIWA 60, as well as modular LED technology.

"We knew exactly what the finished product should look like. Jürgen Johnen and his team made it come true."

BARACK OBAMA

The equipment for the state visit of Barack Obama and his wife Michelle with LED large-screen technology posed a particular challenge due to the high requirements. The EVIWA 30 screen used, with its outstanding picture quality, was the first choice for use at this event.

"The boss himself abseiled down from the hall roof at a height of 25 m and repaired the defective video module in several minutes."

RUHPOLDING

For the Biathlon event in Ruhpolding, five EVIWA video walls ranging from 30 to 80 square meters were installed once again.

"We are more than satisfied with the services of EVENTRONIC. They are very motivated and can always be contacted. They use proven technology which is extremely important when running a studio on a daily basis."

"TRUST WELL MERITED!"

Jürgen Johnen
Managing director of EVENTRONIC

"I have used EVENTRONIC for over 10 years. They have always been punctual and we have never had a single problem. Top quality."

"EVENTRONIC is extremely innovative. The screen container is finally a video screen which does not look like a truck. Set in place, truck away! Great image, great visual rendering!"
